

## Exercises in practical physics for schools of science Volume 2

Filesize: 1.96 MB

### ***Reviews***

*An exceptional ebook and also the typeface applied was intriguing to read through. I have got read and i also am sure that i am going to likely to go through yet again once more in the foreseeable future. I discovered this pdf from my dad and i advised this ebook to find out.*

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 Excerpt: . . . are thus found to vary directly as the square roots of the stretching loads. The student should carefully consider and satisfy himself that this deduction is correct. b) Place a wire on the monochord and stretch it by a known weight. Find the length required to give a note in unison with the tuning fork of which the actual frequency is known. Weigh a measured length of the wire, and find the mass (m) of 1 cm. Express the stretching weight in dynes (W), and hence test the following relationship.  $1 \text{ IT Number of vibrations per second} \propto \sqrt{W}$  dyne is the force which, acting upon a gram for one second, generates a velocity of one centimetre per second. The weight of 1 gram is g dynes, and of m grams is mg dynes. The value of g may be taken as 981 cm. per second. (See Part I. , p. 162. ) 64. Nodes in a String vibrating transversely. (a) Place the bridge accurately at J the length of the stretched wire, and along the longer portion place 12 or 16 small paper riders (Fig. 56) at short intervals. Throw the short length into vibration by a bow, and note that the paper riders are thrown off, except F1g. 56--A paper those at or near a point fj the length of the wire. Do the same with the bridge at J the length, and observe the formation of two points of no vibration, that is, two nodes....
